| 2008 - 2009 | Class 12 (CBSE Board)<br><i>DPS Bhopal</i><br>88.2%                            |

2006 - 2007

Class 10 (CBSE Board)

*DPS Bhopal*

87.4%

---

## Certifications / Awards

---

- Microsoft Certified Professional - Developing ASP.NET MVC Web Applications
- OCJP 6 - Oracle Certified Professional, Java SE 6 Programmer
- Cognizant Certified Student Award.
- Global Recognition Award (Bronze Award) at Bank Of America (July 2014)

---

## Skills

---

Front End Development

Angular , angular material , React Js , Redux , javascript , html , css , es6 , Webpack , Charting Libraries , less/sass , web workers , service workers .

Back End Development

Node .js , Express , Loopback, MicroService Architecture , MongoDB , Redis , AWS Services .

---

## Professional Projects

---

April 2019 - Present

Country Delight Website and Admin dashboards

*countrydelight.in - Online milk delivery*

I am currently leading a team of 2 developers in revamping front end stack (angular 7) at country delight .

Jan 2016 - Mar 2019

insteract.com

*Insteract.com - Simplify business travel*

I worked as a software engineer in Insteract . Its a B2B platform which is used by businesses to reduce their travel expenses . I am currently working on Angular , Loopback - Node.js , Play Framework - Java tech stack.

Implemented new UI theme for the main dashboard . Also developed new front end modules for onboarding new users , integrating social logins , flight results , flight search widget , users personal page etc. From backend side I have worked on integrating major flight meta search engines and providers like SkyScanner , SastiTicket , TBO , Google Flights . Worked on scoring algo logic for main search feed and best deals based on user preferences. Reduced time taken for rendering search results by simplifying the schema on both front and backend. Also worked on a light weight schema specifically designed for mobile apps. Implemented payment(ccavenue) and ticket booking flow for flights.

Sept 2015 - Jan 2016

Talkoot.in

*Talkoot*

I was working as a Senior Developer in Talkoot.in . It's a social platform for traders and investors. I have used React Js in the front end and Node js and php in the backend . Key technologies /features that I have worked on:

- Completely developed talkoot.in website from scratch using React.
- Worked on express based parse-server as nodejs backend.
- Web based push notifications using GCM .
- Link Preview feature - Its a php based script which crawls websites in realtime and caches them

- to generate a preview for the front end.
- Canvas based image resizer which creates a preview / thumbnail images at client side and saves them to AWS S3 storage.
- Facebook and Twitter Auto Posting - Developed module which automatically posts to users facebook wall or page and twitter feed if the user has granted permissions.
- Real Time Chat using websockets (pubnub)
- Increased mongodb performance by improving indexing.
- Load and Performance testing on node js and mongodb servers using Soap UI.
- Wrote multiple python and shell scripts for automating trivial tasks such as automated backups of databases and ec2 snapshots etc.
- Wrote custom module for integrating TradingView chart in the website.
- Wrote a node js module which takes snapshot of chart . Chart data is passed from canvas and on server side it is assembled to give a single snapshot of the page using gd(c++) library . Also data size of image was compressed to make it <100 Kb for canvas datasize > 2 mb . After that it is uploaded to S3 and returned to the user.
- Wrote a module to send bulk emails using Amazon SES . It uses a custom template and also has all the features of tracking user interactions like click , view , subscribe and unsubscribe.
- Automated a daily market summary dashboard which contains daily performance report of NSE stocks. Its a collection of php based webcrawlers that downloads EOD data from NSE website (bhavcopy) , creates a report every day at 6 pm and then sends it as a mail to all subscribers.

Feb 2015 - Aug 2015

Travel-Flag

*Bank Of America*

I worked as Front End Developer. My main responsibility was to integrate foundation framework with existing design and make website responsive.

Oct 2014 - Feb 2015

AGTI Auto Data Provisioning Tool

*Bank Of America*

I worked as Full Stack Developer , I designed complete website as a single page app from scratch , also implemented rest based services for the backend , designed a push notification based system for backend jobs using SignalR , designed schedulers for IIS , also used various jquery grids and data representation libraries like highcharts and raphael for front end.

Oct 2013 - Sept 2014

ExACT – Extrapolatory and Automation Certification Tool

*Bank Of America*

Its a easy to use desktop based QA tool based on hybrid frameworks. My responsibilities included design,development,unit testing and integration with other systems.Some key features implemented by me were using Global low level keyboard and mouse hooks to design screenshot and video playback utility , designed bulk upload utility for HPs QC using OTA library.

---
